Overview of Simplify

- Simplify is a software that will simplify your financial book keeping.
- Simplify has two work flows.
 1. Compute balance sheet and related statements.
 2. Compute capital gains.

Easiness to modify data

Simplify has been designed to read your input statements from excel file, and it also generates the output statements in excel file. This gives you the freedom to modify your financial data with out simplify. You could use Simplify only to when you need to compute the derived statements. When all the statements are in excel file, you have flexibility to share your statements even with people who do not use Simplify.

Low cost solution

Simplify is an opensource and free software. So maintaining your books of account using simplify becomes extremely economical provided you have the commonly used Microsoft Excel with you.
